Context ●○○

# The Growing Parking Dilemma

- With vehicle ownership on the rise, the demand for parking availability has become a critical issue.
- In fact, it is estimated that around 30% of urban traffic is generated by drivers merely searching for parking spots.

Context ○●○

# GeneroCity: An App for Smart Parking

- It aims to ease the exchange of parking spots in real time by leveraging the principle of *generosity*.
- Offers users a comprehensive *Parking Activity Log*:
  - Start date and time
  - End date and time
  - Type of parking
  - Street location

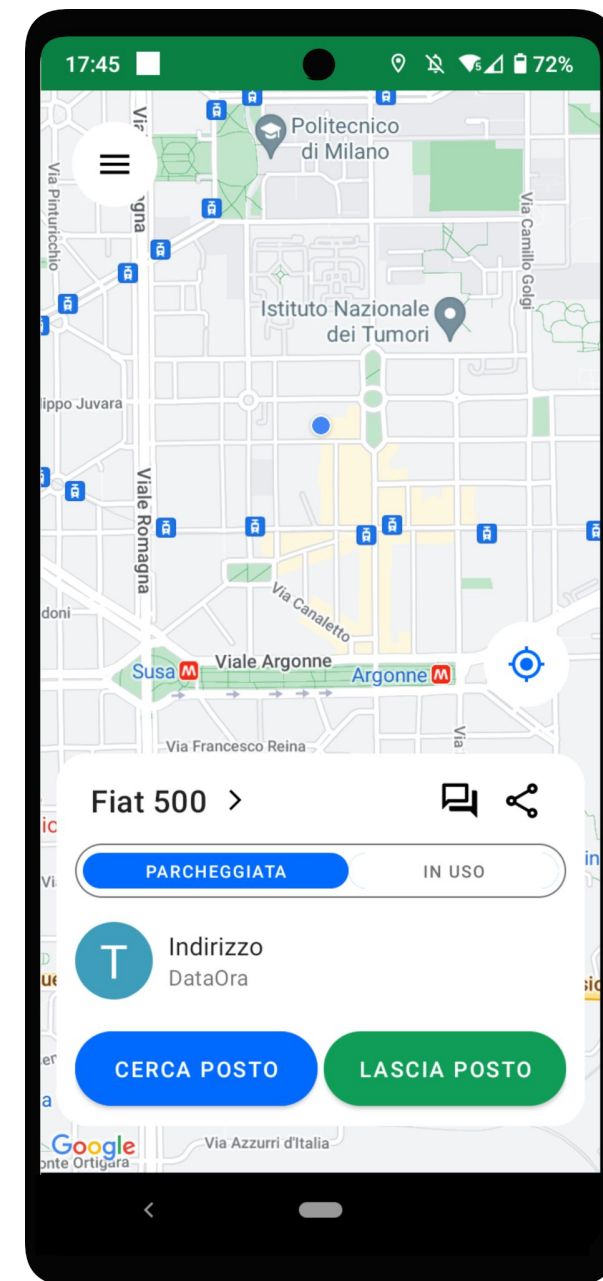

Context ○○●

## How it Works

- To notify others of an available space, users simply press the **LEAVE PLACE** button.
- Meanwhile, those in search of parking can easily tap the **SEARCH PLACE** option to discover openings nearby.

# Sensor Interface & Constants

## Confidence Values:

between 0 and 1, it reflects the probability that the user is in a certain state.

- [0; 0.5) → Walking
- 0.5 → Uncertain
- (0.5; 1] → Automotive

```
public abstract class GCSensorInterface {  
  
    public abstract double getStatus(Calendar timestamp);  
    public void update(Calendar timestamp, SensorData sensorData) {}  
  
}
```

```
public final class GCSensorConstants {  
  
    static void onUpdate(Calendar time) {}  
    private static double compute(Calendar time) {}  
  
}
```

## App Permissions:

- **Android Services:**

allow apps to perform long-running background operations or react to system events without a user interface.

- **Broadcast Receivers:**

listen for specific system broadcasts, such as changes in battery state, network status, or Wi-Fi connection.

First Version •

# Structure and Data Stream

```
public class WifiBroadcastReceiver extends BroadcastReceiver {  
  
    public void onReceive(Context context, Intent intent) {}  
  
}
```

```
public class WifiSensor extends GCSensorInterface {  
  
    private void onData(List<WifiData> listOfWifi) {}  
  
}
```

## Wifi List

### "Redmi Note 9S"

```
WifiData{  
id= ff7d0e27-2f2c-400f-b15f-56cbaa942725  
ssid= "Redmi Note 9S"  
latitude= 45.4729234  
longitude= 9.2286317  
isHome= false  
intervals=  
    [From: 22/09/24 19:23:25, To: NOW]  
    [From: 22/09/24 19:23:16, To: 22/09/24  
19:23:19]  
    [From: 22/09/24 19:23:07, To: 22/09/24  
19:23:11]  
}
```

---

### "FurgoneDellaDigos"

```
WifiData{  
id= 79dac1a2-7522-4621-bb0a-36dc832e332a  
ssid= "FurgoneDellaDigos"  
latitude= 45.4729575  
longitude= 9.2286318  
isHome= false  
intervals=  
    [From: 22/09/24 19:22:50, To: 22/09/24  
19:23:07]  
    [From: 22/09/24 19:22:08, To: 22/09/24  
19:22:08]  
    [From: 22/09/24 19:22:03, To: 22/09/24  
19:22:03]  
    [From: 22/09/24 17:44:59, To: 22/09/24  
19:21:58]  
}
```

# Map Interface and Synchronization

Map Markers

"FurgoneDellaDigos"

Connection Intervals:

From: 22/09/24 19:24:02 To: NOW  
From: 22/09/24 19:22:50 To: 22/09/24 19:23:07  
From: 22/09/24 19:22:08 To: 22/09/24 19:22:08  
From: 22/09/24 19:22:03 To: 22/09/24 19:22:03  
From: 22/09/24 17:44:59 To: 22/09/24 19:21:58

Bottom Sheets

By adding more activities that required the same data, I encountered the issue of **duplicate signals** caused by multiple instantiations of 'WifiManager' and 'WifiBroadcastReceiver' for the same service.

Second Version ○●

## Breakpoint

Two essential features  
are left:

- **User State Calculation:**

this feature would calculate the user's status, providing a value between 0 and 1 to determine the likelihood of the user being in motion or stationary.

- **Fixed Vs. Mobile Access Point Detection:**

this feature would distinguish between fixed networks (e.g., home or office) and mobile networks (e.g., temporary hotspots).

Access Point ••

# Definition and Efficiency

## The Battery Issue:

```
LocationRequest locationRequest = LocationRequest.create()  
    .setInterval(10000) // 10 seconds interval  
    .setSmallestDisplacement(25); // 25 meters
```

### Attributes:

1. id
2. ssid
3. Latitude & Longitude
4. isHome (False)
5. Connection Intervals

Access Point ○●

# Fixed Vs. Mobile

## Check If Home:

```
public void checkIfHome() {  
    this.isHome = this.connectionIntervals.size() > 10;  
}
```

## Reset Wifi Data:

```
if (displacement > 100) {  
    wifiToBeUpdated.resetWifiData(latitude, longitude);  
}
```

Conclusions •

## Conclusions

- In conclusion, the GeneroCity project presents a **promising solution** to the persistent problem of traffic congestion, particularly in urban areas where the daily search for parking can be a frustrating experience for many.
- In future developments GeneroCity may evolve into a more sophisticated tool through the implementation of a **machine learning model**.
